FIRE RATED

Service Shaft Access Panels (FRSS)

Product Overview

Trafalgar Fire Rated Service Shafts are manufactured in Australia and have been designed for use in large openings in fire rated service shafts or risers where access is required for maintenance of services. They provide lockable access to services in these vertical shafts. Trafalgar FRSS panels have been fire tested to Australian Standard AS1530.4 and have attained up to a four hour fire rating for shafts and comply with the National Construction Code (NCC / BCA) Clause C3.13, where 30 minutes fire insulation concessions apply.

For use in large openings
in fire rated service
shafts or risers.

Trafalgar Fire Rated Service Shafts are available with fire ratings of up to 4 hours. When installed they sit flush with the shaft wall surface leaving a neat opening around the perimeter. These panels are secured with an allen key style lock as standard, however a key lock option is also available.

It is easier to design and order standard sizes as these are readily available and competitively priced.

However, other sizes can be manufactured to order.

Access panels are typically installed during construction, but they can also be retro-fitted when additional access is required.

Trafalgar specialise in manufacturing large custom size access panels

with varying hinge and lock options to meet architectural specifications.

Service Shaft Access Panels (FRSS)

Technical Specifications

PRODUCT DESCRIPTION

FIRE RATING 2 Hour -/120/30
4 Hour - /240/30

Door Panel Paint grade Trafalgar panel incorporating proprietary fire-resistant board material.

Frame Fully welded, fully primed steel.

Cut-Out Size Cut out a hole in the fire rated wall to suit the dimensions of the service shaft frame. For example, a 1200x600 service shaft will have a 1200x600 cut out.

Frame Types Flanged Edge (FE) or Wet Wall (WW)

Hinge Exposed hinges.

Lock Budget square key lock as standard (Allen key style lock).

Key lock options available.

Also Available Trafalgar can custom manufacture to meet your specifications.

Trafalgar also supply a comprehensive range of metal, acoustic, customwood, security and speciality access panels.

Wet Wall Frame
(Set bead for plastering in)

Flanged Edge Frame
(Architrave / picture frame)

FRSS – Profile Details

FRSS – Masonry Install

Frame to be backfilled for 4 hour application.

Trafalgar Fire Rated Service Shaft Panels must be installed into the service shaft in positions indicated on the architectural drawings, and in accordance with Trafalgar's installation instructions.

FIRE RATED

Service Shaft Access Panels (FRSS)

Installation Instructions

FRSS – Plasterboard Install

Installation Instructions

1. Mark out and cut an opening in the fire rated wall to suit the dimensions of the service shaft frame (eg. 1200 x 600), taking into account the position of existing framing where a plasterboard wall has been used.
2. With the panel of the service shaft in the open position, insert the panel into position and fix into place using the fixing holes on the inside of the frame with the appropriate fixings as detailed in the above drawings for masonry or plasterboard installations.
3. The panel **MUST BE** painted and sealed to ensure it is appropriately protected and it is fit for purpose.

NOTE:

- The installation of a Trafalgar Fire Rated Service Shaft does not require fire rated sealant.
- Trafalgar Fire Rated Service Shafts have been fire tested to the new and more stringent requirements of Australian Standard AS1530.4-2005.

Trafalgar has developed a range of **installation videos** to assist our customers. To view these step by step install videos please go to www.youtube.com and search for **Trafalgar TV**. Subscribe and you will be notified when new videos are uploaded.
